

How to administer 17P:

1. Clean the vial top with an alcohol swab.
2. Clean the injection site with an alcohol swab.
3. Draw up 1 ml of 17P in a 3ml syringe with an 18-gauge needle.
4. Change the needle to a 21-gauge 1.5 inch needle.
5. Inject in ventrogluteal or vastus lateralis per clinic protocol. The solution is viscous and oily. Slow injection (over one minute or longer) is recommended. Applying pressure to the injection site may minimize bruising and swelling. Rotate left and right sides each week.
6. Store 17P in a dry place away from sunlight
