

# UNC Newborn Critical Care Center (NCCC) Clinical Guidelines

## Guidelines for Hearing Screening

### PURPOSE

To detect congenital permanent bilateral, unilateral sensory, or permanent conductive hearing loss to include neural hearing loss for all infants admitted to the UNC NCCC

### TEST METHOD

All screenings in the NCCC will be completed using Automated Auditory Brainstem Response (AABR) equipment. Infants who are unable to be screened using AABR technology will be screened using DPOAE (Distortion Product Otoacoustic Emissions) technology.

### HEARING SCREENING SHOULD BE COMPLETED:

- As close to discharge as possible
- On room air unless child will need home oxygen
- No earlier than 34 weeks gestation
- Following completion of phototherapy
- Following completion of ototoxic medications

### DEFERRING HEARING SCREENING

- *Transfer to another hospital* – the hearing screen may be deferred however the need for the hearing screen must be indicated on the discharge summary with the recommendation that the receiving institution screen the infant at the time of discharge.
- *Transfer to another unit within the UNC Children's Hospital* – the hearing screen may be deferred however the need for the hearing screen to be completed should be discussed with the transfer service.

### RESCREENING AFTER REFERRAL (FAILURE TO PASS)

Both ears will be rescreened following a unilateral or bilateral referral on initial hearing screen. No more than 2 hearing screens will be completed on any infant. A referral on the second screen necessitates a recommendation for a diagnostic evaluation. The family or caregivers will be contacted by the UNC Pediatric Audiology clinic to schedule the diagnostic ABR evaluation.

### SCREENING HOSPITAL READMISSIONS

All babies  $\leq$  1 month of age who are readmitted to the NCCC for conditions associated with potential hearing loss will have a repeat hearing screening prior to discharge.

### DOCUMENTATION OF SCREENING RESULTS

The audiologist will enter screening results into the patient's medical record within the Newborn Hearing Screening tab in Flowsheets. ***A progress note will also be completed by the audiologist documenting results along with specific follow-up recommendations that are based upon the screen results and identified risk indicators for each infant.***

## RECOMMENDATIONS FOR BABIES WHO PASS INITIAL SCREENING

A chart review will be completed by the pediatric audiologist on every infant screened in the NCCC. Follow-up recommendations are made based upon risk indicators associated with permanent congenital, delayed-onset or progressive hearing loss in childhood. ***Follow-up recommendations should be placed in the discharge summary so that they can be communicated with the pediatrician.***

## NCCC SCHEDULE FOR AUDIOLOGISTS

Hearing screens are routinely performed by the audiologists on Monday, Wednesday and Friday. If a hearing screen is needed on a non-screening day during the week, the nurse should send a request via page to one of the audiologists. If one is needed on the weekend, the well-baby nursery should be contacted to complete the screening.

### Audiologists:

Dr. Shana Jacobs Au.D.

Dr. Laurel Okulski, Au.D.

Coverage	Name	Pager	Phone
<i>Monday and Friday</i>	Shana Jacobs	123-5610	984.974.3659
<i>Monday and Wednesday</i>	Laurel Okulski	123-2991	984.974.3658
